

Detailed Product Description

mainly used in HVAC system and air conditioning system, precision

instrument factory, Electronics Factory, make-up room and paint

Bag filter media is made of multi material. Three layers of filter media is hot melted by imported automatic welder. The first layer is coarse fiber filter cotton to arrest the major dust in air; thinner layer is the fiber filter paper to arrest the smaller dust, the outside layer as the strengthen protection layer. There is separated mesh to make the filter bag with even air flow, low resistance, high efficiency. The reasonable tri-layer design makes the products with excellent performance. The firm hot melting technic avoids the air pressure leakage.

Model	Velocity (m/s)	Color	Efficiency (%)			Resistance (pa)	Dust	
			0.5 μm	1 μm	2 μm		holding (g/m ²)	Single-sided proportion (g/m ²)
FY-45	0.4	orange	30	60	72	40	170	150
FY-65	0.3	green	35	85	90	50	150	155
FY-85	0.15	pink	42	90	95	55	120	165
FY-90	0.1	yellow	90	95	100	65	110	210

FY-950.1	white	92	98	100	70	110	130
