

QSC-5X Gravity Destoner

The principle of the machine:

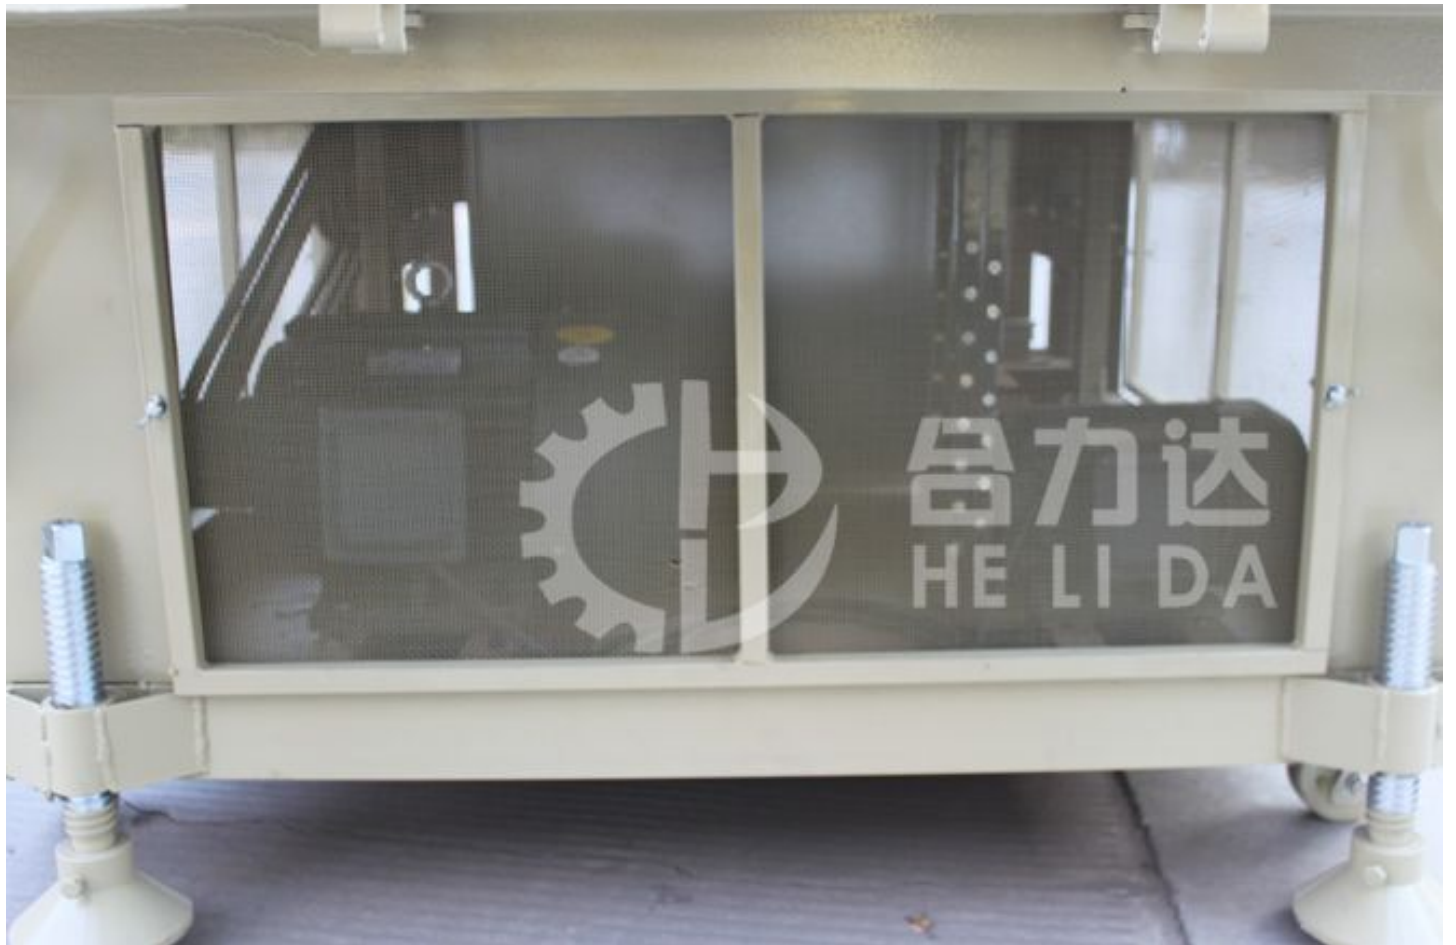

It is based on the proportion of grain crop and cobble density differences, by adjust the pressure and vibration frequency separate the stone and grain. The machine is equipped with a multi blade fan with high accuracy, The lighter grain crops will be suspended state, and the larger proportion of the stones will cling to the stainless steel mesh by adjusting the air pressure, and then by adjusting the frequency that Stoner table vibrates so as to achieve the purpose of separation. The machine equipped with frequency conversion control device can be subtle regulation, even if the proportion of the difference is very small, stones also will be separated.

The data:

Model	Capacity	Power	Weight	Demension	Area of the sieve
QSC-5X	5000kg/h	6.6kw	600kg	2800*1500*1850mm	1300*1500mm

河北合力达谷物精选机械科技有限公司

Wish our machine will be suit for your demand. Any questions,please feel free to ask me.Thanks.
Waiting for your reply.

Best Wishes

David
