公司简介 Company profile

Dongguan Jaten Instrument Co.,Ltd.

It is specialized in dimensional measuring instrument, Image measuring instrument, Coordinate measuring machine, Tool microscope and automatic glue dispensing machine, electronic product dispensing machines PCB dispensing machines etc. Jaten is certified with ISO 9001:2008 quality system. We granted the certification of CE.

It's a research, development, manufacturing and sales in the integration of international high and new technology enterprise.

R& D Head office is located in Dongguan city, China. We have advanced R&D center with 10 engineers and 13 technicians, 2 modern production workshops, more than 300 staffs.

Company products are mainly used in electronic appliances, hardware and plastic products, aerospace, military industry and so on . Many years efforts, Jaten have more than 10 brand agents over the world. Products have exported to more than 40 countries and regions.

QUS Series Advanture & Feature

QVS series of automatical video measuring machine is a new small gantry CNC video measuring machine researched and developed by our company. It adopts imported precision parts to improve the machine's accuracy and stability. The gantry video measuring machine applicated in PCB circuit boards, CCL, flat glass, LCD modules, Cutter Modul and absolutely materials, etc.

- High-precision marble base, beams to ensure high stability and rigidity.
- Small gantry architecture move, load glass Workbench not move, can obtain more higher speeds and not affect to measure.
- Precision grinding rolling bead wire bar and Taiwan TBI precision linear guide, match with Japanese Matsushita servo motor which adopt double closed-loop motion control, can high-speed&accurate positioning and moving stability.
- Japan STC625 high-resolution colorful camera, using our own R&D's surface cold light source which are made from the independent 48 groups light sources, each group uses constant current & continuously adjustable driven, to ensure high-quality measuring image.
- Measuring system uses imported open US GSI precision optical grating ruler, resolution 0.5um.
- Adopted the embedded modul block of Jaten's exploitation to control motor, improves the motor responsive speed and also simplifies the interface between the machine and the PCs connector. They just are connected through the USB cable and the S-terminal cable.
- Automatical continuous zoom lens can zoom automatically, not need manual re-accuracy check.
- Image navigation system can let you locate and measuring workpieces quickly, greatly improve the measuring efficiency.
- With Jaten dedicated automatic video mearing machine software Quick Measuring, can programme& detect automatically, greatly improve the measuring efficiency.
- Optional British RENISHAW touch probe with Φ 1, Φ 2 probe needle, match with **Quick Measuring** automatical video mearing machine software, carry on three-dimensional measurement.

QA Series Advantage & Feature

- Precision grinding rolling bead wire bar and Taiwan TBI precision linear guide, match with Japanese Matsushita servo motor which adopt double closed-loop motion control, can high-speed&accurate positioning and moving stability.
- High-precision marble base, cantilever, and marble workbench to guarantee high stability and rigidity.
- Small gantry architecture move, load glass Workbench not move, can obtain more higher speeds and not affect to measure.
- Japan STC625 high-resolution colorful camera, using our own R&D's surface cold light source which are made from the independent 48 groups light sources, each group uses constant current & continuously adjustable driven, to ensure high-quality measuring image.
- Measuring system uses imported open US GSI precision optical grating ruler, resolution 0.5um.
- Adopted the embedded modul block of Jaten's exploitation to control motor, improves the motor responsive speed and also simplifies the interface between the machine and the PCs connector. They just are connected through the USB cable and the RS232 cable.
- Automatical continuous zoom lens(1-10X) can zoom automatically,not need manual re-accuracy check.
- Image navigation system can let you locate and measuring workpieces quickly, greatly improve the measuring efficiency.
- Automatically Align focus&edge search&measure& adjust light& turn zoom,can operate joystick and mouse, automatically turn the workpiece into the CAD/3D/Excel report
- With Jaten dedicated automatic video mearing machine software Quick Measuring, can programme& detect automatically, greatly improve the measuring efficiency.

QA Series Auto-Video Measuring Machine

The instrument is cantilever CNC double-lens video measuring machine which is developed by our company, it has the following characteristics:

- With dual-lens structure, its efficiency can improve double times compared with the traditional single-lens measuring machine when each time capture the workpieces' profile, so one pcs' measuring capacity more better than two pcs' measuring capacity.
- High-precision marble base, cantilever, and marble workbench ensure high stability and rigidity. Precision grinding rolling bead wire bar and precision linear slideway, match with Japanese Matsushita servo motor which adopt double closed-loop motion control, can high-speed&accurate positioning and moving stability.
- Japan STC625 high-resolution colorful camera, using our own R&D's surface cold light source which are made from the independent 48 groups light sources, each group uses constant current & continuously adjustable driven, to ensure high-quality measuring image.
- Adopting the embedded modules which are developed by our company to control motor, improves the motor responsing speed and simplifies the interface between the machine and the PC. They are connected through the USB cable and the S-terminal cable.
- Double automatic connection zoom lens, automatic turn bigger zoom ,no need people reaccuracy check.
- With automatic measurement software, can program to automatic detection, greatly improving the measurement efficiency.

Intelligent audio brightness uniformity tester QA-4030-TZ

1.Structure Introduction

The device provides a test environment for the workpieces' luminance index, you can find & identify the workpieces' luminance index whether it is normal through the imaging capture. The instrument can measure optical components such as transmittance, uniformity, Chroma and other video measuring Optical index test, The Bottom backlight Provide light for the membrane, use the Imaging colorimeter measure the surface of light permeability components, can measure the transmittance, uniformity, Chroma, color and other optical indicators.

Imager parameters:

2. Working Principle & Usage

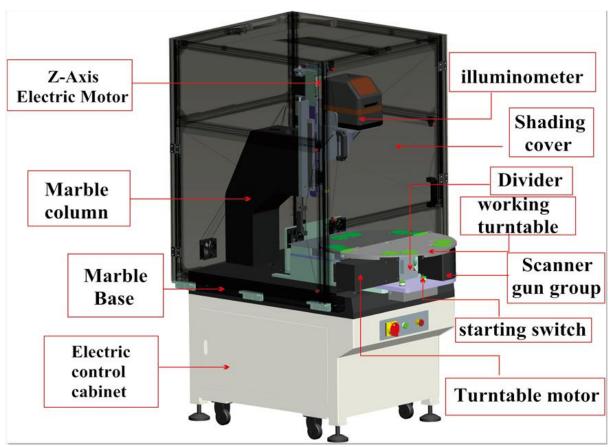

The main principle is to rotate the test object into the testing environment by rotating workbench, test items one by one be tested by Internal image illuminance meter, the optical system software automatically records the luminance index of the tested object and sends it back to the workstation.

Through the optical system software analyzes the measured luminance index, and outputs/export the saved result on the display. The system identy the material OK or NG according to the detected digital.

Jaten Technology Co., Limited

Glue Dispensing machine Usage&Feature

Applied in:

- 1. Semiconductor sealing,
- 2. PCB electronic components fixing and protecting,
- 3. LCD glass board sealing&bonding,
- 4. Mobile phone board coating or button dispensing,
- 5. Electronic digital product dispensing fixed
- 6. Speaker dispensing and boning
- 7. Quantitative gas, liquid-filled coating
- 8. Battery box dispensing and sealing,
- 9. Auto parts coating,
- 10. Hardware parts coating,
- 11. Chip binding&bonding.

Advantage:

- 1.Can replace artificial specific dispensing operations, to achieve mechanized production.
- 2.Dispensing program files can be uploaded / downloaded via U disk to facilitate data management and preservation

3. Simple and convenient operation, high speed and accuracy

- 4. Machine with a needle control buttons, no external guide, debugging more convenient than similar products
- 5. Machine with a needle control buttons, no need external guide, debugging more convenient than similar products
- 6.Dispensing can free to set before&afterdelay time, to eliminate the glue job appears in the "big head" and wiredrawing phenomenon.
- 7. Equipped with SMC dual-rod slide cylinder, keep the machine is quick and stable during operation, eliminating mechanical motion error.

- 1. High-strength equipment body, the machine body using CNC machining to ensure the verticality of the X, Y and Z-axis and improve the processing accuracy, easiest installation and operation;
- 2. Completely without the need for an external computer can stand-alone operation. Not only easy to install, operating settings are simple. User-friendly teaching box allows you to easily complete the program settings;
- 3. With the graphical button design of the teaching box, allowing you to easily set the fingertips to complete any dispensing path settings. But also easy to complete a variety of path matrix copy, offset changes, calibration points set and the program transfer between the super-powerful functions.

Provide After-sale&technical information

- 1. User's Guide&manual
- 2. Structure of the overall map

Quality Assurance System

- 1. In strict accordance with ISO 9001: 2008 quality system for the entire quality control.
- 2. We will conduct a rigorous evaluation process to all outsourcing manufacturers.
- 3. Purchased parts manufacturers are international or domestic brand-name products.
- 4. Outsourcing part of a person responsible for tracking the entire quality, identify problems in a timely manner to ensure that the quality of the various parts of the product pass rate of 100%, high quality and reliability; unqualified products can not enter.
- 5. The implementation standards of the Instrument design and manufacture: GB / T24762-2009

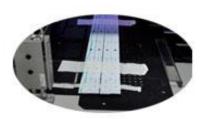

Jaten Technology Co., Limited

A style --online Auto-Glue Dispensing Machine

Glue Dispensing Machine

- machine processing and production
- electronic products' production
- precision instrument manufacturing
- plastic processing production
- digital products' production
- military, aviation and all other sophisticated testing&inspection

Jaten Technology Co., Limited

B style --online Auto-Glue Dispensing Machine

运用于:PBC板, 手机玻璃, 硅胶按键, LED 灯, 耳机, 手机外壳等各领域

Vision Glue Dispensing Machine

- machine processing and production
- electronic products' production
- precision instrument manufacturing
- plastic processing production
- digital products' production
- military, aviation and all other sophisticated testing&inspection

C style -- online Auto-Glue Dispensing Machine

Vision Glue Dispensing Machine

- machine processing and production
- electronic products' production
- precision instrument manufacturing
- plastic processing production
- digital products' production
- military, aviation and all other sophisticated testing&inspection

online vision glue dispensing machine Usage&Feature

- With obviously Cost-effective advantages, reliable and durable, streamlined design
- Suit for multi-standard circuit boards, substrates
- XYZ three-axis precision rolling bead wire bar, servo motor, simple and friendly operating software, the system is stable and reliable
- Suitable for chip packaging, circuit board assembly, medical supplies and other products' dispensing crafts
- Non-touch jet valve HP-810, to achieve a smaller dispensing diameter, improve dispense consistency, reduce material waste and improve productivity and yield.
- UFD control software is easy to operate& program.
- Non-touch jet can eliminate Z-axis movement time, jet speed is 270 points / s, it is 3~8 times than the traditional dispensing.
- Integrated temperature control technology, glue amount automatically fill in, reducing the time which the works exchange.
- Highly flexible Non-touch, avoids needles collision to workpieces, minimum dispensing amounts, suit for more compact space.
- The most advanced nano abrasion-proof materials' accessories, Its life is more 20 times than the ordinary materials

Jaten Technology Co., Limited

Machine Vision system

Equipment using visual inspection system, the system consists of light sources, image sensors, visual controllers, industrial computers, intelligent control rack and other components. Jaten are developing into one of the high-performance integrated machinery and equipment in detection, measurement, resolution, positioning area. The system are group by industrial control computer, special visual sensor and single-chip microcomputer to complete the functions of real-time detection, tracking alarm, statistics and information processing, which can greatly improve the passing rate of finished products.

设备采用视觉检测系统,系统由光源、图像传感器、视觉控制器、工控计算机、智能控制板等组成。 开发成嘉腾集检测、测量、分辨、定位于一体的高性能综合的机器设备。系统由工控机、专用视觉传感器及单片微型计算机组成,完成实时检测、跟踪报警、统计数量及信息处理等功能,能大幅度提高成品的合格率.

working principle 工作原理

In a stable, spot-free, non-flickering light field, the image sensor captures each chip passing through the inspection port, and the vision controller processes and detects the image according to the set parameters and algorithms to output a logic result. If it is wrong, intelligent control panel sends an alarm signal or stop signal, excluding products that do not meet the testing requirements.

在稳定、无光斑、不引起闪烁的光场条件下,图像传感器采集通过检测口的每只芯片,由视觉控制器根据所设置的参数和算法进行图像处理和检测,输出逻辑结果。如果为错误,智能控制板发出报警信号或停机信号,剔除不符合检测要求的产品。

Jaten Technology Co., Limited

Machine Vision system

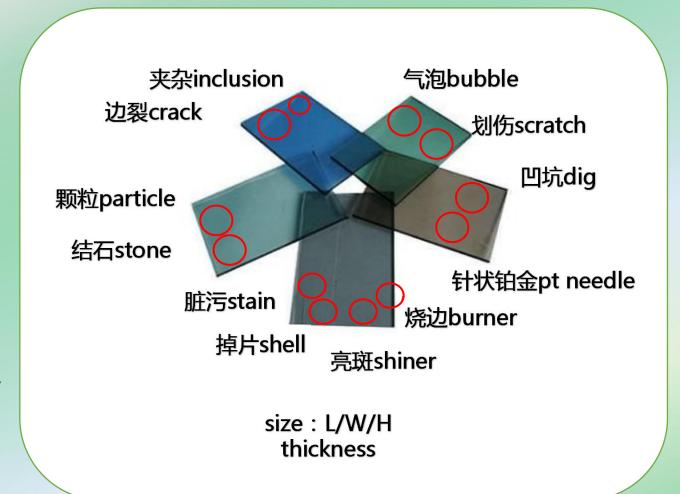

Detection object

Hardware artifacts: used to track, identify all kinds of metal parts in the production process position, pitch, margins and engraving font errors, missing, wrong direction and other phenomena of failure;

Glass products: bubbles, scars, blemishes, sand, stones, light distortion, inclusions and other detection;

Resistance, capacitance, IC, etc.: Printing defects, pin pitch, number of solder joints, air bubbles, small impurities, cracks, leaking, repeated material or incorrect positioning.

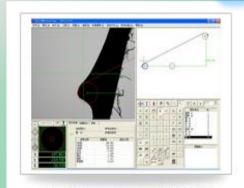

Flatness detection: Specifically for testing a variety of IC chip, a variety of electronic connector pins and its smoothness (horizontal straightness, coplanarity), clearance, pin width. The system is simple set, you can automatically identify, detect, without personnel.

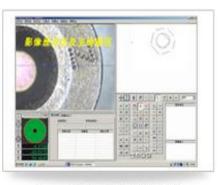

Jaten Technology Co., Limited

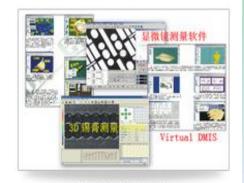

Measuring Machine Software

Quick Measuring 几何测量软件

Jaten McIns几何测量软件

提供多种测量软件

Applicable industries (适用行业):

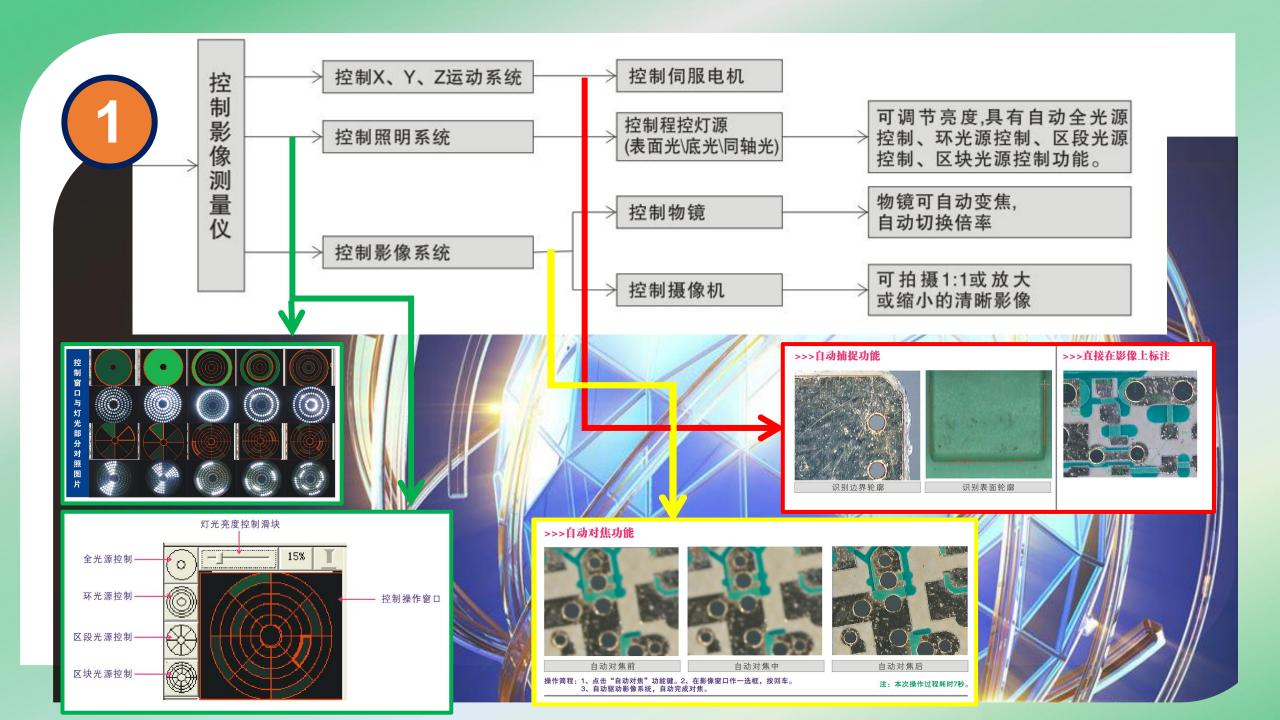

Semiconductor, electronics, wafer packaging, LCD, PCB, LED, connectors, conductive frame, electronic components, precision machining, mold, stamping parts, springs, knives, plastics, bearings, steam locomotive parts industry, precision terminals and other industries' precision measurement project..

It's also the indispensable one of measurement testing equipments which used in the measuring room, laboratory and production workshop.

(半导体、电子、晶圆封装、LCD、PCB、LED、连接器、导电架、电子零组件、精密加工、模具、冲压件、弹簧、刀具、塑料、轴承、汽机车零件业、端子等行业的精密测量工程。也是计量室、实验室以及生产车间不可缺少的计量检测设备之一。)

Quick Measuring具备2D和3D测量功能,若用户要2D测量时,只须点击 "工具→2D/3D测量→2D",会立刻切换到2D测量界面;若用户要3D测量时,只须点击 "工具→2D/3D测量→3D",会立刻切换到3D测量界面.在使用过程中,可以2D、3D界面相互切换。

测量产品的轮廓尺寸(包括产品的边界轮廓与表面轮廓

测量形位公差(直线度、平面度、圆度、线轮廓度、面轮廓度、平行度、垂直度、 倾斜度、对称度、同轴度、位置度等)

工件对比:可输入Autocad图与工件影像对比,也可用标准件对比,进行测量

测

定立产品标准,检测产品是良品或不良品,并将测量数据保存,可生成统计报表。 可以脱机自动检测。

SPC功能,通过抽样进行检测,并出SPC报告,报告将反映出样品的品质情况。

编程自动检测,抽一个样品进行测量,软件会自动把测量过程记录下来,测量下 一个工件时,自动运行保存下来的程式,将实现自动化测量。

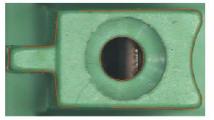

>>>编程自动检测 1 放入一个工件, 并经出工件轮廓 软件会把测量过程记录下来

>>>导入功能这一: 将CAD图纸导入与工件影像对比

CAD原图

导入CAD图与工件成品影像对比

操作简程: 1、点击 "DXF"导入。2、点击"移动对比图形"。 3、拖动鼠标,使图形与影像吻合。

注:本次操作过程耗时30秒。

>>>SPC功能

SPC(Statistical Process

度越高。Cp代表制程的精密度, 其值越大表示产品品质越好。Cpk -4:0 142867 代表制程能力指数,其值越大表 示生产条件越好。

软件绘成的CAD图

说明: 1、Quick Measuring软件绘成的本个CAD图, 共35个图元, 其中, 圆11个,圆弧12个,直线12条。本次报告以输出"圆的半径"、"圆弧半 径"、"直线长度"为例说明。

- 2、用户可在弹出的报告设备窗口,选择需要的报告选项。
- 3、输出的报告,有工件CAD图,也有列表。CAD图中标明XX图元, 与列表中的XX图元数据对应。

Jaten Technology Co., Limited

Packing

1pc with poly bag.wooden case and canton box are available. make sure the machine safe.

Shipping: 2 working days after order confirmed

Service

- 1, One years warranty for the mother board of the machine.
- 2, Life-long maintenance service for the product. We are capable to manufacture dispensing equipment and liquid dispenser according to customer's drawings or samples. We are insisting on providing top quality products with competitive price. Please feel free to contact us. Welcome your inquiry.

1. What is your company type, trade company or manufacturer?

We are the manufacturer of measuring machine/projector/glue dispensing machine/microscope/testing machine.....

2. When does your company establish?

Our company has established since 2002, so we have much work experience for producing measuring machine (CNC/Automatic/with laser & CCD/multi-vision system/Cooridinate....)

3. What is your payment terms?

Normally our payment terms is T/T 100% in advance, if need buy bulk purchase or become our distributors, we can discuss the details each other.

4. What is your trade terms?

Normally, our trade terms is EXW, FOB/ C&F/CIF and others as your request.

5. What is your minimum order quantity?

We do not have minimum order quantity limited, 1 unit is OK.

6. What is your delivery time?

It is depend on your order quantity& wheather we have in stock, the delivery time is about 3-45 days.

7. What is your transport way, by air or by sea?

Normally, we will use the sea for delivery due to our goods is large which caculated the weight or volume weight, For the testing parts is portable and small can by express/air, Specific analysis of the specific circumstances
