

In the chemical industry, depth filters are used to perform critical separations across the spectrum of manufacturing processes: laboratory scale to commercial scale. Chemical raw materials, ingredients and additives demand various degrees of filtration from clarifying filtration to final-polishing filtration prior to additional processing or shipping. For high-temperature, commercial-scale applications, a plate and frame filter press is still the best technology to complete the task. Tianguan offers a line of industrial style filter presses with a wide range of construction material and automation choices. We have the ability to customize the equipment to your application requirements.

Model	Filter Area/m ²	Plate Size/mm	Cake Thickness /mm	Filter Chamber Volume/L	Filtration Pressure /Mpa	Motor Power /kw	Weight/kg	Dimensions/mm
XYZ10/870-30U	10	870×870	30	154	0.6	2.2	1940	2720×1270×1300
XYZ20/870-30U	20	870×870	30	307	0.6	2.2	2230	3500×1270×1300
