

## **High Temperature Filter Press For Medically**

The one time pulling filter press is the total automatic equipment with automatic pressing and automatic cake discharging. Its most important features is that its cake discharging time is short. Instead of discharging the cake by pulling the plate one by one before, all of its filter plates can be pulled open in one time by the pressing of returning of the cylinder to make the pressed fried cake between the plates fall down automatically. Because every plate has been connected to be together by a stainless steel chain. Such form of cake discharging has shorten the discharging time and improved the working efficiency of the filter press much.

This kind of the filter press has the feature of easy operation and saving labors. It is suitable for the middle-small companies in every industries.
