

Fast PCB Prototype Manufacturing

The nature of PCB prototype determines the prototype service must be in fast and rapid manner.

Our fast PCB manufacturing speed is very suitable for rapid prototyping design verification. We have set up a rapid response team. From rapid quotation to production documents, from rapid production to rapid delivery, almost every detail of the rapid PCB prototyping manufacturing process is involved, and we are constantly optimizing and simplifying the whole process.

With our advanced facilities and skilled engineering team, we can accomplish:

- Quick Turn Delivery Option
- 24 Hour quick turn PCB orders.
- Via in Pad technology in 48-72 hours
- HDI technology boards in 3-5 days

Quick and timely delivery

Through the years, we are proud to have been keeping an on-time delivery rate of 99%. We know, apart from PCB quality, the other most important factor is the shortest possible lead-time, which is crucial for engineers' R&D works, especially in the stage of prototyping. We work in three shifts to make sure your PCBs will be on your desk as agreed up and as early as possible.

High Quality PCB Products

PCB is one of the most crucial parts of any electrical and electronic devices. The quality of PCB determines the quality of all these devices. The modern technology makes possible the increasing miniaturization of integrated circuits, higher packing density and smaller layout dimension, hence the higher demands on PCB arise.

PCB Order Quantities

We don't specify the quantity of PCB orders. You can be quick turn Prototype PCB. It doesn't matter if the quantity is only one piece. We also provide small and medium batches and large orders.

We not only have no requirement and limitation in quantity, but also provide low cost quick turn PCB manufacturing service and assembly service as before, no matter how much the order is.

Due to production capacity, labor costs, spare parts procurement costs and other factors, we do not recommend that your quick turn PCB be carried out elsewhere. Quick turn PCB China has unique advantages, such as low price, exquisite production technology and timely and fast delivery capacity.

You need an experienced and reliable manufacturer

When you need to provide rapid prototyping PCB manufacturing for your new design, we are your best choice and partner.

With over eight years of experience in PCB prototyping and manufacturing, we are committed to meeting the needs of customers in different industries in terms of quality, delivery, cost-effectiveness and any other requirements. As one of the most experienced PCB manufacturers in China, we are proud to be your best business partner and good friend in all

aspects of PCB demand.

With advanced equipment, sophisticated equipment, and experienced and friendly engineering expert team, we are the industry leader who provides fast, high quality rigid PCB manufacturing services for all customer partners.

When quality and speed are critical, Jinghongyi PCB can provide you with the fast PCB manufacturing services required for your business, so as to get good operation before competitors.
